Product Requirements Document v1

User Stories & Acceptance Criteria - All 11 Epics

Prepared for ConvergeFlow

April 2026

Bold ideas wait for no one

-
- Epic 1: Authentication & Onboarding
 - Epic 2: Domain Management
 - Epic 3: Mailbox Configuration
 - Epic 4: Lead Generation & Database
 - Epic 5: AI Email Composition (GLM Engine)
 - Epic 6: Campaign Engine & Send Management
 - Epic 7: Dashboard & Reporting
 - Epic 8: Spam & Deliverability Management
 - Epic 9: Scaling & Growth Controls
 - Epic 10: OpenClaw DWY Tier
 - Epic 11: Payments & Billing

Epic 1: Authentication & Onboarding

Sign up via Google/Facebook using Clerk. 5-click wizard: Auth > Domain > Mailbox > Industry > Template.

User Story 1

As a new user, I want to sign up with my Google account so that I can get started without creating another password.

Acceptance Criteria:

- Given a new visitor, when they click 'Sign up with Google', then a Clerk auth flow completes and account is created
- The onboarding wizard launches immediately after first sign-in
- User profile is populated from Google account data (name, email, avatar)

User Story 2

As a new user, I want to complete onboarding in 5 clicks so that I can start getting leads immediately.

Acceptance Criteria:

- Given a signed-in user on step 1, when they complete all 5 steps, then the system begins domain warm-up automatically
- Each step has a single primary action (no branching or multi-field forms)
- Progress indicator shows 5 steps with current position highlighted
- Total time from first click to completion is under 2 minutes

User Story 3

As a new user, I want to choose my industry so that the system pre-loads relevant leads and email templates.

Acceptance Criteria:

- Given onboarding step 4, when user selects an industry, then lead APIs are queried for matching contacts
- At least 10 industry categories are available (solar, contracting, plumbing, roofing, HVAC, landscaping, etc.)
- Selected industry determines default email persona and template

User Story 4

As a returning user, I want to sign in with one click so that I can check my campaign status quickly.

Acceptance Criteria:

- Given a user with an existing account, when they visit the login page, then Clerk SSO completes in one click
- User is redirected to their dashboard immediately after auth

Epic 2: Domain Management

Connect custom domain (copy/paste DNS records, red/yellow/green status tracking) or select pre-warmed domain. 14-day warmup sequence handled by Mailforge.

User Story 1

As a user, I want to connect my custom domain by copying DNS records so that emails come from my business domain.

Acceptance Criteria:

- Given domain setup step, when user enters their domain name, then DNS records (DKIM, SPF, DMARC) are displayed for copying
- Copy-to-clipboard buttons are provided for each record
- Verification check runs automatically every 60 seconds after records are entered

User Story 2

As a user, I want to see domain health status (red/yellow/green) so that I know when my domain is ready.

Acceptance Criteria:

- Red status indicates DNS records not yet propagated or missing
- Yellow status indicates warmup in progress (days 1-13)
- Green status indicates domain is fully warmed and ready for campaigns
- Status updates in real-time without page refresh

User Story 3

As a non-technical user, I want to select a pre-warmed domain so that I can skip DNS setup entirely.

Acceptance Criteria:

- Given domain setup, when user selects 'Use our domain', then a pre-warmed domain is assigned within 60 seconds
- Pre-warmed domains have full DKIM/SPF/DMARC configured
- User can switch to custom domain later without losing campaign data

Epic 3: Mailbox Configuration

Connect email (Gmail, Yahoo, Proton, custom). Mailforge handles warm-up, IP rotation, verification.

User Story 1

As a user, I want to connect my Gmail account so that outreach emails send from my existing address.

Acceptance Criteria:

- Given mailbox setup, when user clicks 'Connect Gmail', then OAuth flow completes and mailbox is linked
- Mailforge begins warm-up sequence automatically after connection
- Connection status is visible on the dashboard

User Story 2

As a user, I want Mailforge to handle email warm-up automatically so that I do not have to learn about deliverability.

Acceptance Criteria:

- Warm-up begins within 1 hour of mailbox connection
- Send volume ramps from 5/day to 30/day over 14 days
- IP rotation is managed automatically by Mailforge
- User receives no technical notifications during warm-up (only completion notice)

User Story 3

As a user, I want to connect a custom email provider so that I can use my business email system.

Acceptance Criteria:

- Given mailbox setup, when user selects 'Other provider', then SMTP/IMAP fields are displayed
- Connection test runs before saving configuration
- Error messages use plain language (not technical SMTP codes)

Epic 4: Lead Generation & Database

Industry selection pre-loads leads from Apollo, A-Leads, Outscraper, Snov.io, D7 Lead Finder. Data freshness tracking.

User Story 1

As a user, I want the system to automatically find potential customers in my industry.

Acceptance Criteria:

- Given industry selection, system queries multiple lead APIs (Apollo, A-Leads, Outscraper, Snov.io, D7)
- At least 25 leads are available within 5 minutes of onboarding completion
- Leads include business name, contact name, email, phone, and location

User Story 2

As a user, I want to see how fresh my lead data is so that I am not emailing outdated contacts.

Acceptance Criteria:

- Each lead displays a freshness indicator (days since last verified)
- Leads older than 90 days are flagged with a warning
- System re-verifies lead emails before sending campaigns

User Story 3

As a user, I want to filter leads by location so that I can target customers in my service area.

Acceptance Criteria:

- Given the lead database, when user sets a location filter, then only leads within that area are displayed
- Filtering by city, state, or ZIP code radius is supported
- Filter persists across sessions

Epic 5: AI Email Composition (GLM Engine)

Email personas/frameworks ('The Closer,' 'The Neighbor'). GLM-5 LLM generates copy. Self-hosted via Ollama (\$20/mo flat).

User Story 1

As a user, I want to select an email persona so that my outreach matches my business style.

Acceptance Criteria:

- At least 4 personas available: 'The Closer', 'The Neighbor', 'The Expert', 'The Helper'
- Each persona generates distinctly different email tone and structure
- Preview of generated email shown before confirming selection

User Story 2

As a user, I want the AI to write my emails for me so that I do not have to be a copywriter.

Acceptance Criteria:

- Given a selected persona and lead list, when user clicks 'Generate Emails', then GLM-5 produces personalized copy
- Each email is unique (no duplicate content across leads)
- Email length stays between 50-150 words

User Story 3

As a user, I want to edit AI-generated emails before they send so that I can add personal touches.

Acceptance Criteria:

- Inline editor allows text modification without leaving the campaign view
- Changes save automatically
- User can regenerate individual emails without affecting the full batch

Epic 6: Campaign Engine & Send Management

Low daily send limit (20-50 emails). Quality over volume approach. Domain reputation protection.

User Story 1

As a user, I want my emails to send automatically each day.

Acceptance Criteria:

- Emails send automatically during optimal hours (9am-12pm recipient timezone)
- Daily volume stays within 20-50 email limit
- Send pacing distributes emails across the day (not all at once)

User Story 2

As a user, I want the system to protect my domain reputation.

Acceptance Criteria:

- Send limits are enforced even if user requests higher volume
- Bounce rate monitoring pauses campaigns if bounces exceed 5%
- Domain reputation score is checked daily via Mailforge API

User Story 3

As a user, I want to see which emails were sent today.

Acceptance Criteria:

- Dashboard shows sent/delivered/opened/replied counts for current day
- Email list shows status icon for each sent message
- Real-time updates without page refresh

Epic 7: Dashboard & Reporting

Mobile-first design. Blue-collar friendly language. No tech jargon.

User Story 1

As a user, I want a simple dashboard that tells me how my emails are doing.

Acceptance Criteria:

- Dashboard displays 4 key numbers: Emails Sent, Replies, Interested, Calls Booked
- Numbers use large, readable fonts
- No charts, graphs, or analytics jargon on the main view

User Story 2

As a user, I want to check my dashboard from my phone while on a job site.

Acceptance Criteria:

- Dashboard is fully responsive and mobile-first
- Touch targets meet 44x44px minimum
- Page loads in under 2 seconds on 4G connection

User Story 3

As a user, I want notifications when someone replies so that I can follow up immediately.

Acceptance Criteria:

- Push notification sent within 60 seconds of reply detection
- Notification shows sender name and first line of reply
- One-tap opens the full reply in the app

Epic 8: Spam & Deliverability Management

EULA and in-app disclaimers shift responsibility for blacklisted domains/bad lists to user.

User Story 1

As a platform operator, I want users to accept responsibility for their email lists.

Acceptance Criteria:

- EULA explicitly states user responsibility for list quality and compliance
- In-app disclaimer shown before first campaign launch
- User must check acknowledgment box before sending

User Story 2

As a user, I want the system to verify email addresses before sending.

Acceptance Criteria:

- Mailforge pre-send verification runs on all leads before campaign launch
- Invalid emails are flagged and excluded automatically
- Verification results shown as pass/fail count before send confirmation

User Story 3

As a user, I want unsubscribe links in every email so that I stay compliant.

Acceptance Criteria:

- Every outgoing email includes a one-click unsubscribe link
- Unsubscribed contacts are permanently excluded from future sends
- Unsubscribe rate is tracked and displayed on dashboard

Epic 9: Scaling & Growth Controls

'Book a Call' CTA for scaling requests. Prevents system overload. Creates high-touch sales opportunity.

User Story 1

As a user, I want to request higher send volumes so that I can grow my outreach.

Acceptance Criteria:

- When user clicks 'Send More Emails', a 'Book a Call' CTA is presented
- Calendly or similar scheduling widget is embedded
- No self-service volume increase is available (prevents abuse)

User Story 2

As a platform operator, I want to manually approve scaling requests.

Acceptance Criteria:

- Admin dashboard shows pending scaling requests
- Each request includes user's current stats (send volume, bounce rate, reply rate)
- Approval triggers automatic volume increase in user's account

User Story 3

As a user, I want to understand why my volume is limited.

Acceptance Criteria:

- In-app messaging explains quality-over-volume philosophy
- Language is positive: 'We keep your sends low so every email lands in the inbox'
- Comparison data shows higher reply rates at lower volumes

Epic 10: OpenClaw DWY Tier

Done-With-You tier via WhatsApp or phone. OpenClaw agent handles entire campaign setup and management.

User Story 1

As a busy business owner, I want someone to handle my entire email outreach.

Acceptance Criteria:

- DWY tier includes complete campaign setup by OpenClaw agent
- Single phone call onboarding (15-30 minutes) replaces self-serve wizard
- Daily management updates sent via WhatsApp channel

User Story 2

As a DWY customer, I want to communicate via WhatsApp.

Acceptance Criteria:

- Dedicated WhatsApp channel created for each DWY customer
- Text and voice note communication supported
- Response time SLA of 4 hours during business hours

User Story 3

As a DWY customer, I want to see results without logging into a dashboard.

Acceptance Criteria:

- Weekly summary sent via WhatsApp with key metrics
- Format: plain text with numbers (no links, no charts)
- Monthly detailed report available on request

Epic 11: Payments & Billing

Stripe (US) + Paddle (global tax compliance). Self-Serve ~\$300/mo, DWY ~\$500/mo, Enterprise ~\$3k setup.

User Story 1

As a user, I want to pay with my credit card to start my subscription immediately.

Acceptance Criteria:

- Stripe checkout handles US payments with instant activation
- Card details are never stored on ConvergeFlow servers (Stripe tokenization)
- Payment confirmation email sent within 60 seconds

User Story 2

As an international user, I want to pay in my local currency.

Acceptance Criteria:

- Paddle handles non-US payments with automatic tax calculation
- Local currency display at checkout
- Tax receipt generated automatically and emailed

User Story 3

As a user, I want to see my billing history so that I can track expenses.

Acceptance Criteria:

- Billing page shows all past invoices with download links
- Current plan and next billing date displayed prominently
- Cancel/downgrade option available without contacting support
